

The IEEE Transactions on Sustainable Energy - to be published quarterly starting in April 2010 - is intended to be a cross disciplinary and internationally archival journal aimed at disseminating results of research on sustainable energy that relates to, arises from, or deliberately influences energy generation, transmission, distribution and delivery. The journal will publish original research on theories and development on principles of sustainable energy technologies and systems. The Transactions will also welcome manuscripts on design, implementation and evaluation of power systems that are affected by sustainable energy. Surveys of existing work on sustainable energy may also be considered for publication when they propose a new viewpoint on history and a challenging perspective on the future of sustainable energy.

If you are interested to published in this archival IEEE journal, please submit your manuscript at the following website. Authors are required to register on this site before submitting their contributions.
