

## Power Engineering Career Video - Now Available!

At a time when the economy is still struggling to employ more people, the power and energy sector is concerned about having enough new talent to replace experienced engineers who are retiring. To build the power and energy engineering pipeline, the Power and Energy Engineering Workforce Collaborative was formed; more will be available in the July / August edition of the IEEE Power & Energy Magazine in an article titled "Engineering our Future". One supporting initiative is a video to build power engineering career interest with students in middle and high school. The project, jointly sponsored by IEEE PES and the Center for Energy Workforce Development, was managed by Alex Flueck. The video is now viewable on the PES site homepage <http://www.ieee-pes.org/>. You can find it under 'Hot Topics' toward the bottom of the PES page on the link titled "The Power Industry Needs You!" Please make every opportunity to use this video to develop career interest with those in their formative years.
