

## Open Access License Options for IEEE Authors

A growing number of IEEE authors are choosing to publish their work Open Access, which allows readers everywhere to access the article without permission or a subscription. IEEE offers two Open Access options for our authors—the Open Access Publishing Agreement (OAPA, the default license) and the Creative Commons Attribution license (CC BY). Many authors are not well versed on the differences but want to know which license is best for them. This document reviews the similarities and highlights the key differences.

### OAPA

OAPA is specific to IEEE and is the recommended option for most authors. As with any OA license, articles published under OAPA will be freely accessible to all readers. However, with OAPA, copyright is transferred to IEEE.

Authors publishing under OAPA are allowed to post the final, published versions of their articles to their personal websites, institutional repositories, or any repository required by their funding agencies. Authors who submit their articles under the traditional IEEE Copyright Form (i.e., articles that are not intended to be published Open Access) [may post only the \*accepted version\*](#).

OAPA allows users to copy the article, translate it, or use it for text or data mining as long as the purpose is non-commercial.

### CC BY

Creative Commons licenses such as CC BY are used by many academic publishers. The CC BY license grants the most liberal reuse rights of all commonly used OA licenses. It allows users to distribute, reuse, modify, and build upon a work as long as proper attribution to the original article is provided. Works published with a CC BY license may be used for commercial purposes.

Some funding agencies, most notably the RCUK and Wellcome Trust in the UK, require grant recipients to publish with a CC BY license.

## Key differences

There are two key differences between the OAPA and CC BY licenses. The first is the transfer of copyright. Under OAPA, copyright is transferred to IEEE, while under the CC BY license, copyright remains with the author. Transferring the copyright to IEEE enables IEEE to protect a work from copyright infringement and plagiarism. This is a benefit to authors, as many do not have the time or resources to monitor the appropriate reuse of their work.

The second difference concerns distribution rights. The CC BY license grants more liberal reuse rights. Articles published under a CC BY license may be reposted or reused freely without the author's permission, even for commercial purposes, as long as proper attribution is given. OAPA limits rights for reposting and reuse, and commercial reuse is not permitted.

Article processing charges (APCs) and other fees are the same for both options.

## Choosing a license type

After an article has been accepted, the corresponding author will be prompted to transfer the copyright. If an author selects OA, he or she may choose between the OAPA and CC BY licenses. Authors must also indicate if they are government employees in the US, UK, or EU. In some instances, custom licenses are needed for government employees.

OAPA is set as the default, and is recommended for most authors. Some authors, most notably those funded by the RCUK or Wellcome Trust, may need to select CC BY. Authors should check their funding agency requirements to see if a particular license type must be used.

## Changing the license type

Authors who accidentally select the wrong license type or who need to change their license type because of funding requirements should contact the IEEE Intellectual Property Rights Office at [copyrights@ieee.org](mailto:copyrights@ieee.org).
